What is Group Policy?

Group Policy (GPO), a feature of the Microsoft Windows NT family of operating systems, is a set of rules that control the working environment of user accounts and computer accounts. It offers the centralized management and configuration of operating systems, applications, and users' settings in an Active Directory environment.

Group Policy can configure most system settings, save power by utilizing smart power settings, give individual users more control over their machines with administrator privileges and increase system security.

This guide will introduce steps to help you master how to quickly add and modify the new GPO template for configuring your installation of Foxit Reader.

Personal Computer Setting

Set Template Preference

- Please click Start > Run or use the shortcut key Ctrl + R and type gedit.msc to open Group Policy Editor.
- Right-click the management template and choose Add/Remove Template in the context menu. In the opened dialogue box, add the group policy template of Foxit Reader (Foxit Reader.adm). The Foxit Corporation template will appear in the left navigation pane and you can set its template preferences.
Example: Set the Start Page

- Choose Foxit Reader > Menus > View > Remove Start Page.
- Double-click Remove Start Page to open the dialogue box and check the option Enabled. All the settings related with the Start Page will be removed in Foxit Reader, including Start Page, menu items, and the Start Page options in Preferences.
- If check the options Unconfigured or Disabled, the Start Page will be displayed and set with the original logic of Reader.
● Other options are configured in the same fashion.

**Note:** Group Policy setting includes computer configuration and user configuration. Computer configuration takes precedence over user configuration. The application will use the computer configuration if both the computer and user configure a specific function at the same time. Please note that if the option **Disabled** is a valid configuration, the setting will be shown in the help information. If not, the corresponding registry entry will be removed as selecting Unconfigured. (The value of the option Disabled in the Group Policy Template of Foxit Enterprise Reader is invalid.)

**GPO Deployment (for Server)**

**Create GPO Management**

● If you already have an Active Directory domain and organizational unit configured, please skip to “Apply the Foxit Template” section.
● Choose Start > Administration Tools > open “Active Directory Users and Computers” > right-click the field “wx.com” > choose New > Organization Unit in the right-click menu.
In the opened New Organization Unit dialogue box, type the unit name (For this example, we have named the unit “qa”) and click OK.
Right click the created organization unit “qa” and choose New > User in the right-click menu. For this example, we have named the user “King”
Click Start > Programs > Administration Tools > open the Group Policy Management Console and right-click the created organization unit “qa” and choose Create and Connect GPO.

If you cannot find the Group Policy Management in Administration Tools, please install the application package GPMC.MSI. You can download the package by clicking the link http://www.microsoft.com/windowsserver2003/gpmc/default.mspx.
Apply the Foxit Template

- Type the GPO name in the “Create GPO” dialogue box and click OK.

- Right-click the new GPO and choose Edit in the right-click menu to open Group Policy Editor.
• Right-click the Template Management and choose Add/Remove Template to add Foxit Reader.adm. Please refer to Set Template Preference.

• For configuring options, please refer to Example: Set the Start Page.
The following table introduces some simple manipulations in GPO to speed up your working process.

## Items in GPO Template

<table>
<thead>
<tr>
<th>Folder Path</th>
<th>Item</th>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foxit Reader</td>
<td>Plugin</td>
<td>Disables Plugin List</td>
<td>Add plugins which need to be disabled. Users need to enter the file name of the plugins in the program folder: <code>\Program Files\FoxitSoftware\FoxitReader\plugins</code>. Only supported plugins have .fpi extension.</td>
</tr>
